UPLOGIX INC.

QA Engineer

Uplogix appliances automate administration, maintenance, and recovery tasks of devices from manufacturers like Cisco, Juniper, and iDirect securely and regardless of network availability. We also work with devices from Garmin, Iridium, and ServerTech. Our software runs on custom hardware, as well as a virtual machine.

The primary role of the QA Engineer at Uplogix is to evaluate product quality and reliability, ensure adherence to product requirements, and to be an advocate for customer satisfaction. This role requires understanding company goals and gauging testing strategies in a dynamic environment. Communication skills are critical to determine testing requirements. Additionally, we are looking for someone with the desire to learn new technologies and maintain networking and communication devices in a lab environment.

Responsibilities

- Perform manual feature and system testing on hardware and software
- Write thorough bug reports and communicate issues to developers
- Collaborate with engineering to create test scenarios

Required Qualifications

- Comfortable working with Linux and other command line interfaces
- Self-driven with excellent communication skills
- Experience developing and executing test plans

Preferred Qualifications

- 4+ years of test experience
- Experience configuring enterprise switches, routers, and servers
- Familiarity with networking concepts (IP Routing, DHCP, DNS)
- Familiarity with testing web applications
- Experience working in a small team

Additional Information

Candidates must be authorized to work in the US as permanent residents. We are not offering relocation or sponsorship.

Please send your resume to qajobs@uplogix.com.
